

## **Sprint 1 Report, SWAP, 10/30/23**

- **Actions to stop doing:**

We should stop holding our meetings on Fridays after class because most of our team has to leave right after, so we changed the meeting time to Saturday over Zoom. We should stop assigning multiple high priority tasks to a single person because they can get overwhelmed.

- **Actions to start doing:**

We should start being more active in our team group chat with updates on our progress or if anybody needs help with anything. We should start being more prompt when we start our tasks for the sprint to avoid tasks rolling over to the next sprint.

- **Actions to keep doing:**

We should keep having our quick stand up meetings where we talk about our updates. We should keep having individual meetings with team members so that people can get necessary help.

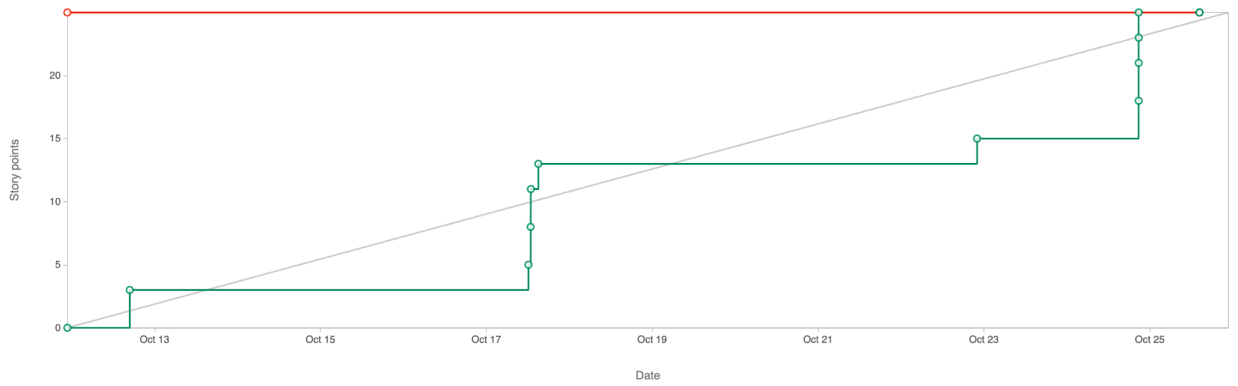

- **Work completed/not completed:**

Not completed: User Interests end to end functionality

Completed: Account creation, account login, posting end to end functionality

- **Work completion rate:**

We fully completed the user story for posting images with descriptions. We completed most of the account creation and login user story, we just have to finish the new user interest selection component. Estimated work hours: 20 hours per person. Estimated days: 10 days. For the next sprints we expect an average of 3 tasks total for each sprint assigned to each team member. These tasks will be spread across the two user stories that we have assigned for each sprint.
